

Pro Co Sound Speaker Cables

Brand	To create Model Number	End Configurations	Standard Lengths	Termination	Outer Jacket O.D.	1/4" Contact Material	Banana Plug Contact Material	Speakon Contact Material	# of Conductors/Gauge	Assembled in	Unique Attributes	Why Buy Me?	25' MSRP
Lifelines™													
	LSC10 (End Configuration) - (length)	1/4" / 1/4" (default), BB, BN, BQ, NN, NQ	3', 5', 6', 10', 15', 20', 25', 30', 50', 75', 100'	Solder	.408"	Ni	Ni	Ni	(2) 10 gauge	USA	ArmorFlex jacketed 10 gauge 2-conductor portable speaker wire, designed for bass players who really want the true sound of their instrument, not the sound of the free air resonance of their speaker. Also works well for P.A. Subwoofers and D.J. low end.	Tightens low end damping factor remarkably, even in 3' lengths. Bridges the gap between a good bass guitar sound and a your real one.	\$137.49
Excellines Power Plus™													
	S12 (End Configuration) - (length)	1/4" / 1/4" (default), BB, BN, BQ, NN, NQ	3', 5', 6', 10', 15', 20', 25', 30', 50', 75', 100'	Solder	.375"	Ni	Ni	Ni	(2) 12 gauge	USA	The previous industry standard gauge for speaker cable, using G&H Industries brand connectors and ArmorFlex cable to provide the most reliable 12-gauge cables available.	Great for weekend working bands for use in PA systems mainly used for vocals and/or horns. Tough, reliable and the industry standard heavy-gauge speaker for over 30 years.	\$72.49
	S14 (End Configuration) - (length)	1/4" / 1/4" (default), BB, BN, BQ, NN, NQ	3', 5', 6', 10', 15', 20', 25', 30', 50', 75', 100'	Solder	.325"	Ni	Ni	Ni	(2) 14 gauge	USA	For the past five years, 14-gauge has finally replaced 16-gauge as the "most purchased" speaker cables Pro Co builds. The more copper you can afford, the better your system will sound and the less it will have to work to get you the sound you want.	When you need good, reliable speaker cables, but the budget is very tight right now, use PowerPlus 14-gauge cables to get you by until you can upgrade.	\$50.49
	S16 (End Configuration) - (length)	1/4" / 1/4" (default), BB, BN, BQ, NN, NQ	3', 5', 6', 10', 15', 20', 25', 30', 50', 75', 100'	Solder	.260"	Ni	Ni	Ni	(2) 16 gauge	USA	Pro Co does not recommend 16-gauge speaker cables for live use. Nonetheless, we sell 75,000 of them a year. Use them in systems with 100-200 watts only, nothing more.	Buy 16-gauge speaker cables if the money is just too tight to buy 14 or 12 gauge cables. Using 16 gauge cable, significant power is lost through cable resistance; amps have to work too hard to pump out the sound and there is poor damping factor making the low end mushy and indistinguishable.	\$39.99
	S114 (End Configuration) - (length)	NN, N - (2) 1/4", N - (2) B	3', 5', 6', 10', 15', 20', 25', 30', 50', 75', 100'	Ultrasonic Welding	0.57	Ni	Ni	Ni	(4) 11 gauge	USA	Multicircuit speaker snakes have the advantage of quick hookup compared to using a number of single speaker cables. They make setups and teardowns faster and leave the stage considerably less cluttered.	Multicircuit speaker snakes are sometimes required, usually when the speakers are bi- or tri-amped with electronic crossovers before the power amp.	\$187.99
	S138 (End Configuration) - (length)	NN		Solder	.590"	Ni	Ni	Ni	(8) 13 gauge	USA			\$312.99
	S16BQF-1	Adapter cable -Dual Banana to 1/4" female inline jack	1'	Solder	.375"	Ni	Ni	-	(2) 16 gauge	USA	Use this adapter cable when you have to get from a 1/4" connector to a power amp equipped with dual binding post speaker outputs only.	As long as you play, you will need adapters to fit the situations you run into time after time. Get them early; avoid the panic.	\$28.99 (1' length)
	S16NQF-1	Adapter cable - Neutrik 4-pole Speakon to 1/4" female inline jack	1'	Solder	.375"	Ni	-	Ni	(2) 16 gauge	USA	Use this adapter cable when you have to get a 1/4" connector cable into a Speakon 4-conductor equipped speaker output on a power amplifier.		\$34.49 (1' length)
