

APPLICATION INFORMATION

CONTROLS:

SPEAKER INPUT:

1/4" 3-conductor phone jack, wired for use with standard 2-conductor plug, accepts signals from unbalanced line level or speaker-level sources such as phonographs, audio and video tape recorders and movie projectors. Has 16-ohm, 5-watt dummy load, 20 dB attenuator network, and low-pass filter (-3 dB @ 8 kHz, 6 dB/octave). Input impedance: approx. 16 ohm.

LINE INPUT L/R:

RCA phono jacks, resistively mixed to monaural, for signals from nominal -10 dBV sources such as radio, cassette or VCR outputs. Input impedance: approx. 4 kohm.

MIC INPUT:

Female 3-pin XLR-type connector provides independent microphone input (brought out to output barrier strip) for announcer, lecturer, etc.

HUM CANCEL:

Ground-lift switch, used to reduce hum and buzz by eliminating ground loops and providing proper grounding for various conditions. Breaks connection between input and output shields.

NOTES:

1. SPEAKER INPUT uses 3-conductor jack to switch 16-ohm resistor, 20 dB attenuator and 8 kHz low-pass filter into circuit. Do not use 3-conductor ("stereo") plugs or plugs with long tip/sleeve insulators (such as Switchcraft #288).
2. It is suggested that volume controls on source equipment be set at the halfway position. A typical output of approx. 1 watt into a 16 ohm load (approx. 4 v RMS) is assumed. **It is strongly suggested that the volume control for the PA system be kept at a low setting when connecting the AVP-1 and setting initial levels to avoid possible damage to loudspeakers.**
3. LINE IN level is nominally -10 dBV (300 mV). Use of both jacks for resistive mixing of two low-impedance sources will cause 6 dB of signal loss (in addition to the transformer step-down/insertion loss).
4. HUM CANCEL position is typically used when connecting sources with 3-wire grounded AC line cords, assuming that the PA system is properly grounded. For safety reasons all equipment with 3-wire AC line cords should be connected to properly grounded receptacles. Note that HUM CANCEL switch does not affect MIC IN connector as it is an independent circuit.
