

APPLICATION INFORMATION

CONTROLS:

PARALLEL LINE IN/OUT:

Male and female 3-pin XLR-type connectors wired in parallel to two 3-conductor 1/4" (6.3mm) phone jacks accepts signal from low-impedance (0 ohm nominal) line-level source to provide simple connection and loop through for any combination of XLR connectors and 2- or 3-conductor phone plugs. Input impedance (with 600 ohm load on ISO OUT): approx. 680 ohm.

ISO OUT:

Male 3-pin XLR-type connector or 3-conductor 1/4" (6.3mm) phone jack provides floating transformer-isolated low-impedance output to feed line-level input. Recommended load impedance: 600 ohm.

GND/LIFT:

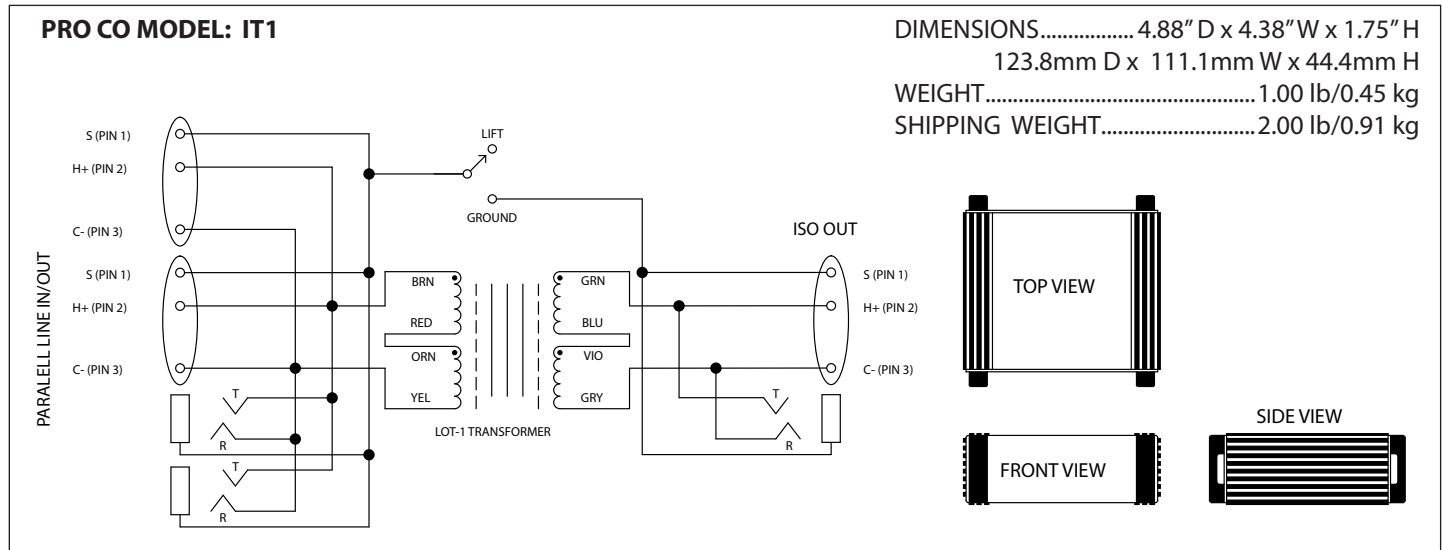

GND position connects pin 1 (and jack sleeve) of LINE IN/OUT to pin 1 (and jack sleeve) of ISO OUT. LIFT position "floats" ISO OUT. Used to reduce hum and buzz by eliminating ground loops and providing proper grounding for various conditions.

NOTES ON GROUND LIFT SWITCH:

1. GND/LIFT switch settings assume the mixer is also the central ground reference point for the system. For safety reasons all equipment should be equipped with 3-wire AC power cords and plugged into properly grounded receptacles. Use of the GND/LIFT switch should minimize hum and buzz.

If GND/LIFT switch seems non-functional, check wiring of cable plugged into the LO-Z OUTPUT. A cable with a jumper between pin 1 and the connector shell will defeat the GND/LIFT switch.
